

Playtesting

The goal is to assess the player's first complete interaction cycle inside the initial room, including discovery of the environment, use of the E key to interact with clues, and emotional engagement with the scene.

We want to identify any points where the player feels confused, detached, or unsure about what to do, and test whether the room effectively introduces the game's tone and mechanics.

Focus Areas:

- Control Discovery: Do players learn how to move and interact naturally?
- Clue Visibility: Is the first clue visually noticeable and inviting?
- Interaction Feedback: Does pressing E feel responsive and meaningful?
- Emotional Tone: Does the room evoke curiosity, sadness, or nostalgia?
- Flow & Timing: Do players know what to do next, and is the pacing smooth?
- Environmental Clarity: Do lighting, sound, and visuals guide attention effectively?
- Player Understanding: Do players connect the clue to the story or memory theme?

Playtesting Questions:

1. How easily did you understand what you were supposed to do in the first room?
2. When you reached the clue, how did you realize you could press E to interact?
3. After pressing E, did you clearly understand what changed or happened in the scene?
4. How did the moment of interacting with the clue make you feel?
5. What would make this interaction (or the whole room) more engaging or clear?
